

Universal 66 Block Adapter

ITC-3002C

Adapts 66M or 66B Blocks to 4 Pair Modular Jacks

- ◆ Permanent or temporary installations
- ◆ Works with wiring in place
- ◆ Eliminates the connecting block
- ◆ Converts 66 Blocks to modular connections

- ◆ Easy Test Access
- ◆ Trouble-Shooting from any type of 66 block
- ◆ Allows modular cross connects
- ◆ Easy Half-Tap for cut over purposes

Building Wiring Jobs May Be Easier Than You Think!

This compact tool is housed in a durable, fiberglass reinforced, plastic case. The hardened contacts are designed to make reliable connections even with repeated use. It cleans the lugs as it is plugged on to the block to insure a clear connection every time.

Saves Installation and Repair Time

The Universal 66 Block Adapter lets you conveniently test or install telephone equipment from 66B or 66M blocks, saving countless hours on every job. It can be used on repair visits to isolate trouble or to test new cable installations. The ITC-3002C can adapt directly from a 66 block to a telephone base cord eliminating the connecting block and associated wiring. It also allows conversion of 66 blocks to modular patch panels.

1,2,3, or 4 pair modular plugs can be plugged directly into the Universal 66 Block Adapter. However, the pin count may be different on some 3 pair systems.

-- Successfully Used for CAT5 Test Access --

NOTE: The ITC-3002C is included in the accessory package for Independent Technologies' Test-All IV®, four pair copper cable tester.
